Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.

Claim 4; SEQ ID NO 8; 79pp; English.

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polypucleotide, a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and acrier; and an monoclonal antibody that specifically binds to the synthetic

```
apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and antiandinal. The synthetic apolipoprotein-E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinaemia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E mimicking polypeptide enhances binding of low-density lipoprotein-E mimicking mimicking polypeptide of the invention.

(UABR-) UAB RES FOUND

Anantharamiah GM, Garber DW, Datta G;

Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.

Claim 4; SEQ ID NO 13; 79pp; English.

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide, a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E RESULT 4

```
c mimicking polypeptide encoding polynucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and a monocolonal antibody that specifically binds to the synthetic and a polipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide antiarteriosclerotic, cerebroprotective, and cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and cardiant, vasotropic, antiarteriosclerotic, mimicking polypeptide is cusquil for reducing serum cholesterol in a subject (including a mammal cusquil for reducing serum cholesterol in a subject (including a mammal cultimaginal). For treating occonary artery disease, dysbetalipoproteinsemia or troke; for breaking an embolus in the subject; dysbetalipoproteinemia or troke; for breaking an embolus in the subject; colypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. ```
the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein-E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, app. the manner or cangutan); for treating coronary artery disease, chimpanzee or orangutan); for treating coronary artery disease, chimpanzee or orangutan); for treating coronary and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E mimicking polypeptide chances binding of low-density lipoprotein (UDL) or a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E mimicking polypeptide of the invention.

Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.

Claim 4; SEQ ID NO 91; 79pp; English

The invention relates to a novel synthetic apolipoprotein-E mimicking polygeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polynucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and

```

mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein. E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinnemia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject, and also for treating angina. The synthetic apolipoprotein. E mimicking polypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (VDD) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein. E mimicking polypeptide of the invention.

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polypucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E apolipoprotein-E
                                                                                                                                                     vasotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholesterol; coronary artery disease; dysbetalipoproteinaemia; atherosclerosis; myocardial infarction; siroke; embolus; angina; low-density lipoprotein; LDL; very low density lipoprotein; VLDL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis
                                                                                                                                    apolipoprotein-E mimicking polypeptide; antilipaemic; cardiant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                ΰ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 4; SEQ ID NO 115; 79pp; English.

The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide, a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.
                                                                                                                                                                                   apolipoprotein-E mimicking polypeptide; antilipaemic; cardiant; vasotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholesterol; coronary artery disease; dysbetalipoproteinaemia; atherosclerosis; myocardial infarction; stroke; embolus; angina: low-density lipoprotein; LDL; very low density lipoprotein; VLDL.
                                                                                                                                                 Synthetic apolipoprotein-E mimicking peptide, SEQ ID No 129.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 4; SEQ ID NO 129; 79pp; English.

antianginal. The synthetic apollopprotein-E minicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinaemia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E minicking polypeptide enhances binding of low-density lipoprotein (LDL) or very low density, lipoprotein (LDL) to a cell and enhances degradation of LDL or wiminicking polypeptide of the invention.
  vasotropic, antiarteriosclerotic, cerebroprotective, and

(UABR-) UAB RES FOUND.

ö Datta Anantharamiah GM, Garber DW, WPI; 2004-411629/38.

Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.

Claim 4; SEQ ID NO 117; 79pp; English.

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polypuclectide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic and apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide, and activities: antilipaemic, cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide, a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polynucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and a monoclonal antibody that specifically binds to the synthetic anolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide and a carrier; and apolipoprotein-E mimicking polypeptide and activities; antilipaemic, cardiant, vasotropic, antiateriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein-E mimicking polypeptide is

Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis

Claim 4; SEQ ID NO 116; 79pp; English.

comprises an amino acid sequence

```
ö
          useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating ocronary artery disease, dysbetalipoproteinaemia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E mimicking polypeptide enhances binding of low-density lipoprotein (ULD) to very low density lipoprotein (VLD) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E mimicking polypeptide of the invention.
                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                              apolipoprotein-E mimicking polypeptide, antilipaemic; cardiant; vasotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholestreol; coronary artery disease; dysbetalipoproteinaemia; atherosclerosis; myocardial infarction; stroke; embolus; angina: low-density lipoprotein; LDL; very low density lipoprotein; UDL).
antianginal. The synthetic apolipoprotein-E mimicking polypeptide is

Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.

Claim 4; SEQ ID NO 74; 79pp; English

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide and activities: antilipeamic, cardiant, vasotropic, antiarteriosoleroric, cerebroprotective, and antiandinal. The synthetic apolipoprotein-E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-B mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E amimicking polypeptide. The synthetic apolipoprotein-E cardiant, vasotropic, antiatreciosclerotic, cerebroprotective, and antiandinal. The synthetic apolipoprotein-E mimicking polypeptide is subject in a subject (including a mammal antianding serum cholesterol in a subject (including a mammal

such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape,

antianginal. The synthetic apolipoprotein-E mimicking polypeptide is

```
ö
chimpanzee or orangutan); for treating coronary artery disease, despetablishments or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E mimicking polypepticle enhances binding of low-density lipoprotein (IDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E
                                                                                                                                                                                                                                                                                                                                                                                                                       apolipoprotein-E mimicking polypeptide; antilipaemic; cardiant; vasotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholesterol; coronary artery disease; dysbetalipoproteinaemia; atherosclerosis; myocardial infarction; stroke; embolus; angina; low-density lipoprotein; LDL; very low density lipoprotein; VLDL.

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polypucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic and apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antlarteriosclerotic, cerebroprotective, and

Claim 4; SEQ ID NO 53; 79pp; English

comprises an amino acid sequence.

             useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, himpanzee or orangutan); for treating ocronary artery disease, dysbetalipoproteinaemia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke, for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E mimicking oblypeptide enhances binding of low-density lipoprotein (ULD) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E mimicking polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polymucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and a monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiateriosclerotic, cerebroprotective, and antianginal. useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape; dyshetalipoproteinaemis or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject, and also for treating angina. The synthetic apolipoprotein. E mimicking obytypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein. E mimicking mimicking polypeptide of the invention.

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                               (without alignments)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                    (without alignments)

apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic, caradiant, vasotropic, antiarteriosclerotic, cerebroprotective, and antiarginal. The synthetic apolipoprotein-E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinaemia or atherosclerosis; and for reducing the risk of mycardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E mimicking polypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E
                                                                                                                                                                                                                                                                                                                                                                                                                        mimicking polypeptide of the invention.

the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiatreriosoclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein-E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal cuch as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, chimpanzee or orangutan); for treating coronary artery disease, chimpanzee or orangutan); for breaking and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E mimicking polypeptide enhances binding of low-density lipoprotein (LDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E mimicking polypeptide of the invention.

(UABR-) UAB RES FOUND

Anantharamiah GM, Garber DW,

Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence. WPI; 2004-411629/38.

Datta G;

Claim 4; SEQ ID NO 91; 79pp; English.

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polynucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polypeotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic

```
cc an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E minicking polypeptide. The synthetic apolipoprotein-E cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and cantianginal. The synthetic apolipoprotein-E minicking polypeptide is antianginal. The synthetic apolipoprotein-E minicking polypeptide is cuseful for reducing serum cholesterol in a subject (including a mammal csuch as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, composatelipoproteinamia or atherosclerosis; and for reducing the risk of composatelipoprotein and also for treating angina. The synthetic apolipoprotein. E minicking polypeptide enhances binding of low-density lipoprotein (UDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein. E minicking polypeptide of the invention.

apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipeemic, cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein-E mimicking polypeptide is cardiant for reducing serum cholesterol in a subject (including a mammal cueful for reducing serum cholesterol in a subject (including a mammal cueful for reducing serum cholesterol in a subject (including a mammal chimpensee or orangutuan); for treating coronary artery disease, dysbetalipoproteinaemia or atherosclerosis; and for reducing the risk of myocardial infarction or attrove; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein-E mimicking colypeptide enhances binding of low-density lipoprotein (ULDL) to a cell and enhances (degradation of LDL) or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E mimicking polypeptide of the invention.
                                                                                                                                                                                                                                                                                                           ö

cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein-E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinadmia or atherosclerosis; and for reducing the risk of myocardial infarction or atherosclerosis; and for reducing the subject, and also for treating angina. The synthetic apolipoprotein (in subject) polypeptide enhances binding of low-density lipoprotein (in [DL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein. E mimicking mimicking polypeptide of the invention.

mimicking polypeptide has the following activities: antilipaemic,

```
polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and apolipoprotein-E mimicking polypeptide and a carrier; and apolipoprotein-E mimicking polypeptide apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide and a carrier; and a polypeptide has the following activities: antilipaemic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel synthetic apolipoprotein-E mimicking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.
                                                                                                                                   apolipoprotein-E mimicking polypeptide; antilipaemic; cardiant; vasotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholesterol; coronary artery disease; dysbetalipoproteinaemia; atherosclerosis; myocardial infarction; stroke; embolus; angina; low-density lipoprotein; LDL; very low density lipoprotein; UDL;

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polymucleocide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E apolipoprotein-E

Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.

Claim 4; SEQ ID NO 115; 79pp; English.

Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence

Claim 4; SEQ ID NO 74; 79pp; English

The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide, a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and antianginal. The synthetic apolipoprotein-E mimicking polypeptide is useful for reducing serum cholesterol in a subject (including a mammal 

ô such as a mouse, rat, rabbit, cow, sheap, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalioproteinaemia or atherosaclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein. E minicking apolyapeticide enhances binding of low-density lipoprotein (UDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL, by a cell. This sequence represents a synthetic apolipoprotein. apolipoprotein-E mimicking polypeptide, antilipaemic, cardiant; vasotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholesterol; coronary artery disease; dysbetalipoproteinaemia; atherosclerosis; myocardial infarction; stroke; embolus; angina, low-density lipoprotein; LDL; very low density lipoprotein; VDDL. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide; a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polynucleotide; a composition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and an monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide has the following activities: antilipaemic, cardiant, vasotropic, antiarteriosclerotic, cerebroprotective, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          apolipoprotein-E mimicking polypeptide; antilipaemic; cardiant; vasotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholesterol; coronary artery disease; dysbetalipoproteinaemia; atherosclerosis; myocardial infarction; stroke; embolus; angina; low-density lipoprotein; LDL; very low density lipoprotein; LDL;
                                                                                                                                                                                                                                                   Gaps

                        useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chingparzee or oranguran); for treating coronary artery disease, dysbetalipoproteinaemia or atherosclerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein in the subject; polypeptide enhances binding of low-density lipoprotein (UDL) or very low density lipoprotein (VLDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein-E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel synthetic apolipoprotein-E mimicking polypeptide. The invention further comprises an isolated nucleic acid encoding the synthetic apolipoprotein-E mimicking polypeptide, a vector, a host cell, a recombinant cell or a transgenic, non-human subject (including animal or plant) comprising the synthetic apolipoprotein-E mimicking polypeptide encoding polypeptide acomposition comprising the synthetic apolipoprotein-E mimicking polypeptide and a carrier; and a monoclonal antibody that specifically binds to the synthetic apolipoprotein-E mimicking polypeptide. The synthetic apolipoprotein-E mimicking polypeptide and a carrier; and apolipoprotein-E mimicking polypeptide activities: antilipaemic, cardiant, vasotropic, antiatreriosclerotic, carebroprotective, and antianginal. The synthetic apolipoprotein-E mimicking polypeptide is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Synthetic apolipoprotein-E mimicking polypeptide useful for treating coronary artery disease, dysbetalipoproteinemia or atherosclerosis comprises an amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 vasotropic; antiarteriosclerotic; cerebroprotective; antianginal; serum cholesterol; ocronary artery disease; dysbetalipoproteinaemia; atherosclerosis; myocardial infarction; stroke; embolus; angina; low-density lipoprotein; LDL; very low density lipoprotein; VLDL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Synthetic apolipoprotein-E mimicking related R18L linear peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                apolipoprotein-E mimicking polypeptide; antilipaemic; cardiant;

useful for reducing serum cholesterol in a subject (including a mammal such as a mouse, rat, rabbit, cow, sheep, pig, human, monkey, ape, chimpanzee or orangutan); for treating coronary artery disease, dysbetalipoproteinaemia or atherescalerosis; and for reducing the risk of myocardial infarction or stroke; for breaking an embolus in the subject; and also for treating angina. The synthetic apolipoprotein. E mimicking polypeptide enhances binding of low-density lipoprotein (ULDL) or very low density lipoprotein (ULDL) to a cell and enhances degradation of LDL or VLDL by a cell. This sequence represents a synthetic apolipoprotein. E mimicking mimicking polypeptide of the invention. 8x38888888xx

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A. Description: The sequence of C. elegans cosmid F31F4.
A. Reference number: Z21149
A. A. Accession: T31316
A. Status: preliminary; translated from GB/EMBL/DDBJ
A. Molecule type: DNA
A. Mesidue: 1-265 cBLA
A. Cross-references: UNIPROT:017136; UNIPARC:UPI000007D19A; EMBL:AF024503; PIDN:AAB70384.
A. Experimental source: strain Bristol N2; clone F31F4
